

RELEASE NOTES Version 3.2.0 / Mar 3, 2024

This update contains some exciting new features as well as useful updates to existing ones. In addition we have corrected some known issues and fixed bugs that will enhance your experience.

NEW FEATURES

- Shared Queries: Users can now share saved queries with other members of their agency
- Shared Queries: Users can access System level saved queries that will be added based on usage trends
- Existing Query Manager: New view allows users to perform a variety of actions with their saved queries

IMPROVEMENTS

- Event Analysis: Added crash type symbology to map points and common attribute data grid
- Custom Area: GeoJSON uploads of custom areas now support MultiPolygon features
- Custom Area: GeoJSON file upload dialog has been updated with better instructions and a more pleasing UI
- Custom Area: Polygon shapes can now have holes cut in them (BETA)
- Custom Area: Polygons can now be multipolygons (BETA)
- Custom Area/Custom Network: New layout with more detailed instructions for use
- Time Period: Multiselect filters show category name instead of generic term when displaying a summary tag
- Saved Queries: Added a description field to saved queries
- Saved Queries: Date range/Years are no longer applied to saved queries to ensure proper data access authorizations are followed
- Saved Queries: Users can update time period filters from saved query selection

BUGS SQUASHED

- Fixes bug where map selected intersections display an undefined popup on hover
- Selecting the Custom tab no longer resets the map zoom level
- Editing a query no longer clears the current extent
- Multiselect filters for Time Period no longer reset when choosing a different date range type
- Fixes bug where popups would display in strange places
- Hour of day filter fixed
